GOPALAKRISHNAN S

Java Full Stack Developer

Chennai, Tamil Nadu | +91 9940654740 | gopalakrishnansrgy2005@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Aspiring Java Full Stack Developer with a strong foundation in Java, Spring Boot, RESTful APIs, MySQL, and React.js, backed by hands-on internship experience and six academic and industry projects spanning the full software development lifecycle. Skilled in object-oriented programming, relational database design, and responsive front-end development, with additional cross-disciplinary expertise in embedded systems, IoT, and real-time data acquisition. Adept at writing clean, maintainable code, debugging complex issues, and collaborating effectively in Agile team environments. Seeking an entry-level Full Stack Developer role to design, build, and deliver scalable, enterprise-grade web applications.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+)

Front-End Development: HTML5, CSS3, JavaScript, React.js, Bootstrap, Responsive Web Design

Back-End Development: Spring Boot, RESTful API Design & Development, Java Servlets

Database Management: MySQL, Relational Database Design, SQL Queries, Stored Procedures, Triggers

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, DBMS, Software Development Life Cycle (SDLC)

Tools & Platforms: Git, GitHub, Swagger, Thunder Client, VS Code, Eclipse, Antigravity, MS Office

Embedded & IoT: ESP32, Embedded C, IoT Sensor Integration, Proteus 8, Keil uVision5

INTERNSHIP EXPERIENCE

Java Full Stack Developer Intern — IAT Technologies (*May 2026 – Sept 2026***)**

- Gained hands-on experience in Java, Spring Boot, SQL, React, HTML, CSS, and JavaScript while developing a Learning Management System (LMS) for managing institute-related academic activities and operations.
- Built core LMS modules covering student management, trainer management and assignment, course management, and coordination of students with their respective courses and trainers.
- Contributed to backend development using Java and Spring Boot, developed RESTful APIs, and integrated the application with a relational database.
- Worked on frontend-backend integration, along with application testing, debugging, and troubleshooting to ensure smooth and reliable system functionality.

SOFTWARE PROJECTS

Banking Application : *Java*

- Architected a modular banking platform supporting secure account administration, transaction processing, and automated ledger balance inquiries.
- Implemented core Object-Oriented Programming principles (Encapsulation, Inheritance, Polymorphism) to ensure system maintainability and scalability.
- Integrated robust exception-handling mechanisms to secure transaction execution and prevent invalid state modifications.

Student Management System *: MySQL*

- Designed a normalized relational database schema to manage institutional student records with optimized query performance.

- Authored advanced SQL queries, stored procedures, and multi-table joins with enforced transaction boundaries to maintain data integrity.
- Implemented database triggers and constraints to automate record verification and streamline administrative operations.

Ice Cream Shop Website *: Html, Css , javaScript , React.js*

- Developed a fully responsive e-commerce web interface optimized for seamless cross-device accessibility and user engagement.
- Programmed dynamic shopping cart functionality, including item management, state updates, and real-time price calculations.
- Applied CSS Flexbox/Grid layouts and JavaScript event-driven programming for an intuitive, interactive customer experience.

ACADEMIC PROJECTS

Silver Guardian — IoT Safety Monitoring System *Jan 2026 – Apr 2026 | ESP32, Embedded C, IoT*

- Developed microcontroller firmware integrating multi-sensor telemetry (fall detection, vital signs) with real-time GPS tracking.
- Optimized end-to-end telemetry pipelines from edge hardware sensors to centralized monitoring dashboards under strict power constraints.
- Authored and presented a technical research paper detailing system design, efficacy, and safety impact.

Distress Saviour Band — Wearable Safety Device *Sept 2025 – Nov 2025 | ESP32, Embedded C, Sensors*

- Built a reliable wireless data pipeline from wearable sensors to a remote monitoring endpoint for real-time emergency alerts.
- Programmed manual and automatic emergency-trigger logic with false-alert filtering to improve system reliability.
- Utilized Proteus 8 and Keil uVision5 for hardware simulation, debugging, and firmware validation prior to deployment.

CERTIFICATIONS

- Java Developer — Infosys Springboard
- Front End Web Developer — Infosys Springboard
- Embedded Systems Workshop — Microcontroller applications and hardware integration

EDUCATION

B.E., Electronics & Communication Engineering *Oct 2022 – Apr 2026*
Panimalar Engineering College | CGPA: 8.97/10

HSC (Class XII) *Jun 2021 –May 2022*
Anjuham Hr. Sec. School | Percentage: 86.83%
